Optoma announces the UHD60 and UHD65-- a pair of native 4K projectors with a price tag under $2500, both featuring 3840 x 2160 resolution and HDR compatibility using HDR10.

The projectors also include REC.2020 wide colour gamut and DCI-P3 coverage, as well as vertical lens shift and 1.6x zoom. Connectivity comes through x2 HDMI inputs and x1 HDCP 2.2 port.

The lower-priced UHD60 offers 3000 lumens brightness and 1000000:1 contrast ration with Dynamic Black enabled, and comes inside a white chassis. Meanwhile the UHD65 has 2200 lumens brightness, 1200000:1 contrast ratio with Dynamic Black enabled and Cinematic colour via HDR compatibility and RGBRGB colour wheel, all inside a black chassis.

“We are incredibly excited to launch our much anticipated first 4K UHD HDR compatible home projectors, the UHD60 and UHD65," Optoma says. "The advanced DLP single-chip design from Texas Instruments ensures absolute image integrity delivering over 8 million pixels to screen. Without doubt the 4K UHD experience requires the biggest of images, which the two new projectors deliver at an affordable price to home users.”
