Channel Vision announces new IP-based intercom systems together with a 7-inch IP Touchscreen Room Station. The IP systems centralise home electronics into one system, and send push notifications to the touchscreen or phone app when someone rings the doorbell.

For single family homes, the SI-8000 series front door stations are an ideal addition able to provide a first line of defense against home invasions and burglaries.

Meanwhile the SIM series IP intercom provides a complete solution for access control to apartments, duplexes, offices and other MDUS. Visitors call the touchscreen by either using the scrollable directory or dialing the floor and unit number. Residents receive video push notifications with the option to lock/unlock the door on the touchscreen, tablet or smartphone.

The IP front door stations (SI-8000 series and SIM series) and touchscreen room station are shipping now.
