Lilin presents an IP security solution-- the IPC0522 Door Station, a device providing 1080p video together with an adjustable speaker and microphone with Echo cancellation for 2-way communication.

Designed for both outdoor and indoor use, the IPC0522 offers continuous recording of full HD 30fps video through connection with a Lilin NVR. The built-in camera uses lens distortion connection for high quality wide-angle video, while Sense Up+ and 3D Noise Reduction boost low light performance for images lacking in motion blur.

A companion Lilin app allows users to establish video connections, open doors, view video and check recordings from anywhere in the world. Power comes through PoE, while SD card is an option for storage.

The Door Station integrates easily with 3rd party SIP products for the streaming of audio and video via direction with other SIP-compliant devices. Also included is ONVIF support for integration with 3rd party CCTV systems. As well as remote entry control, the Door Station can also find use in video monitoring, with motion, tamper and alarm detection.

The IPC0522 is available in brush and matt finishes.
