The idea allows anyone to deploy a dedicated personal collaboration device for video meetings, phone calls, and interactive whiteboarding.

The first Zoom for Home device is the Zoom for Home – DTEN ME, an all-in-one personal collaboration device that will be available in USA for \$599.

It was launched at InfoComm 2020 Connected (video link below).

Zoom Meetings and Zoom Phone users can easily log in to the Zoom for Home – DTEN ME for one-touch video meetings, phone calls, content sharing, interactive whiteboarding, and co-annotation.

The 27-inch, all-in-one device includes 3 built-in smart cameras for video, an 8-microphone array, and an ultra-responsive touch display that can also serve as a second monitor.

Setup is simple-- it works out of the box to create an immersive and productive workspace.
