The Chord Company promises the Shawline high-performance audio cables will add nothing to signals passing through-- “no colouration, no signal loss and no interference.”

Featuring the company's Tuned ARAY technology, the Shawline analogue interconnects (available in DIN, phono and XLR versions) are fitted with silver-plated Chord VEE 3 phono plugs with PTFE insulation. Meanwhile the conductors are built from silver-plated multi-strand oxygen-free copper, insulated with PTFE and contained within a flexible outer jacket to further reduce noise.

Shawline also comes in a Digital flavour-- one using propietary ARAY conductor geometry and silver-plated Chord VEE 3 plugs with PTFE insulation or high-performance silver-plated BNC connectors.

The final product in the range is a loudspeaker cable featuring silver-plated conductors and high-frequency-effective shielding. It is available in off-the-reel and factory-terminated lengths fitted with gold-plated banana plugs.

Shawline cables are shipping now.
