

Extra Power through Cool Power Amps

Written by Marco Attard

RTI announces the new 4-channel CP-450 and 16-channel CP-1650 audio amplifiers-- ideal for use with RTI's 8-zone AD-8 distributed audio system.

Adding 50W per channel (the AD-8 provides 25W per channel), the amplifiers extend speaker outputs in larger installations and carry the same Cool Power technology inside the AD-8's built-in class D amplifier.

The CP-1650 also offers audio input level adjustment on each channel, loop-in/loop-out connections (for simple daisy chaining) and bridgeable audio outputs.

The CP-450 and CP-1650 are suitable for rack-mount or freestanding installations, with voltage trigger, RS-232 and IR power control options allowing for power control through different sources.
