

TV Audio is SpeakerCraft's Protégé

Written by Marco Attard
03. 07. 2012

SpeakerCraft aims to improve your customers' TV audio with the Protégé-- a single-box TV speaker packing loudspeakers, subwoofers, DSP technology and Bluetooth support.

It carries two 5.25-inch woofers (inside a tuned enclosure), four 2.5-inch midranges and two 1-inch soft dome tweeters. A 60W power supply feeds all components, and custom DSP electronics improve male and female vocals, increase higher listening levels and deepen bass.

An on-board limiter protects the woofer driver from getting over-powered while maintaining clean and undistorted sound, even at high output levels.

Bluetooth support allows users to connect mobile devices for the streaming of web-based or stored music.

The Protégé sits beneath TV sets and works with TVs that are both wall mounted or on stands. It should be available from Q3 2012.
