Boat-owning customers should be interested in the latest offering from Boss Audio's Marine line-- the MR218UA AM/FM/CD receiver, with illuminated, no-slip buttons and European frequency support (with 24 presets).

RCA outputs allow for full-range and subwoofer amps, while an internal amp drives up to x4 speakers at 80W per channel. CD access comes through flip-down face, and inputs include rear USB and AUX in IPX6-rated, 1.5-DIN housing.

Control can come through the optional MRC21 remote, with RF communications providing control from different boat areas or rooms.

Also available from Boss Marine are the MR404 and MR202-- two small power amplifiers with bridgeable power plants. The MR404 (400W max, 200WRMS) is 4-channel and can run in 2-channel mode, while the 2-channel MR202 (200W max, 100W RMS) can also function as a 1-channel monoblock.

Both amps feature line-level and speaker-level inputs, variable gain control and are marinised to prevent rust and corrosion with specially treated circuit boards, rubber control panel cover and weatherproof connectors.
