

The Twistiest Bluetooth Speaker Around

Written by Marco Attard

The DBEST Transformative Bluetooth Hifi system has a literal twist on the usual speaker designs thanks to a convertible design with two outer sections users can rotate up to 180 degrees.

The "flexible" design allows users to tweak and twist the speaker into a whole range of shapes, from wiggling snakes to a simple donut-like structure (or torus, if one wants the technical term).

Audio-wise the Transformative carries a pair of 3W loudspeakers with 180Hz-20kHz amp frequency range. Input comes through Bluetooth 2.1 connectivity, microSD slot, mini USB and 3.5mm aux port.

An built-in microphone allows use as a speakerphone while an on-board OLED display shows caller ID, song information and more. Power comes through a rechargeable battery promising up to 50 hours of music.
