The Amina AIW Series In-Wall Loudspeakers claim to be the world's first high-performance hidden loudspeakers. Designed to be skimmed over with up to 3/16" of plaster or drywall compound, the AIWs provide a totally concealed audio solution that allows complete interior design flexibility without the visible presence of speakers.

Whether the room is square, rectangular, or even curved, AIWs are a perfect fit every time! And once plastered in, they become completely sealed and protected.

This makes the AIW speakers suitable for wet areas such as pools and bathrooms, and for clean rooms where walls and ceilings need to be regularly washed or wiped down.
