

ISE 2013 will host a number of launches from Genelec-- the G Series loudspeakers and F Series subwoofers, a new home audio product range the company says blends high performance with sustainability.

The first Genelec home audio products, both series feature power management technology ensuring the meeting of upcoming Energy-Related Products (ErP) directive requirements.

Construction is also eco-friendly, with recycled aluminium speaker cabinets.

The G Series has 4 models, each designed to for use in different listening environments. Practical room response controls are standard, while Genelec claims the smooth curves of the Minimum Diffraction Enclosure (MDE) Directivity Control Waveguide (DCW) are not simply for show-- they are essential elements in the loudspeakers' acoustic design.

F Series subwoofers feature an unobtrusive, modern design with different connectivity options ensuring convenient connection to any device, be it portable audio players, PCs or home cinema systems through line level outputs.
