

Sonance sets to present the Sonarray series at ISE 2013-- an all-weather outdoor speaker range with the more price-conscious customer in mind.

The package consists of x8 distinct satellites and an 8-inch dual voice-coil underground subwoofer, a combination capable of evenly distributed audio in outdoor spaces of up to 185 sqm with minimal sonic overspill.

The bijou Sonarray SR1 speakers incorporate 3.5-inch anodised aluminium cones and present an 8ohm load to standard amps. Installation involves a simple daisy-chain configuration, with the subwoofer connected to both channels.

Sonance also caters for large residential and commercial installations with the Sonance Landscape Series (SLS) High Output (HO) models, following the same sat/sub form factor but with upscaled audio potential.
