Harman Kardon launches a wireless addition to the Go + Play speaker and dock family-- the Go + Play Wireless, a portable speaker with Bluetooth connectivity.

Compatible with all Bluetooth-enabled devices, the Go + Play Wireless uses Harman's own TrueStream technology to address the effects of Bluetooth compression on sound quality, providing superior audio no matter the application or source the customer uses.

Wired input is also available via 3.5mm jack and USB port.

Two Atlas woofers, two Ridge tweeters and intelligent EQ technology promise a rich sound spectrum over a wide listening area. Power comes through either AC power or x8 type-D alkaline batteries.

The Go + Play Wireless is available in either black or white in a sleek stainless steel device and ships by end March 2013.
