

Kinetik Adds to In-Ceiling Speakers

Written by Marco Attard

Kinetik Labs launches the KISP-E200-LP-- a 200mm (8-inch) speaker the company says ideal for in-ceiling applications demanding maximum performance at a tighter budget.

Mid- and high-range response is identical to the earlier KISP-E160-LP, but bass response sees improvement through a wider (40mm) polypropylene speaker cone.

Meanwhile a centralised pivoting silk dome tweeter allows installers to direct sound where it is needed.

The ultra-low profile circular grille attaches magnetically for easy installation, and is replaceable with a square grille (available for all E160-LP and E200-LP speakers) for an alternate look.
