With Summer making a slow yet welcome return (about time!), your customers will soon want to spend more time outdoors-- making the Marmitek BoomBoom 260 an ideal audio addition for trips in the outside world.

The BoomBoom 260 is a wireless speaker compatible with most (if not all) Bluetooth-enabled devices. It carries two 50mm drivers inside a tough polycarbonate plastic case Marmitek claims is waterproof, floatable and dust resistant, allowing one to take it anywhere without accident-related worries.

Rubber sides ensure the speaker is shockproof, and speakerphone functionality allows one to answer incoming calls through the built-in loudspeaker.

Power comes from a 1800mAh battery providing up to 10 hours of music on a single charge.

The BoomBoom 260 is available now.
