BMB announces the 6.5" REVOLVE series of TruAudio Speakers and is now releasing a full assortment of 6.5 inch models to compliment the current 8 inch models already available.

In-ceiling speakers can be a solution for an 'invisible' yet great sounding system. The TruAudio In-ceiling line delivers exceptional sound quality and is easy to install.

The REV6-LCR Model lineup offers a solution to fit any budget, room or system requirement. They can perform as the front left, center, or right speaker, and as with all of the LCR models, they can be rotated to point toward the listening area.

All models have nominal 8 ohms impedance.
