The TruAudio speaker lineup grows with with additions covering both residential and commercial markets-- the OL-70v 2-way outdoor and the CL-70v in-ceiling speakers.

The OL-70v is, as the name implies, rated at 70V but is switchable to 8 ohms impedance if required. Taps are 2.5W-25W selectable, with a large ABS cabinet housing a 6.5-inch polypropylene MF/LF driver and a 1-inch silk dome tweeter.

One can mount the cabinet either horizontally or vertically. An aluminium grille attached with anti-corrosion brass fittings protects the weather resistant drivers, and should be able to stand more damp and humid environments.

The TruAudio CL970v also features 70V and 8 ohm settings as well as 70V 2.5W-25W selectable taps. The unit carries a 6.5-inch polypropylene woofer and an integrated 0.75-inch silk dome tweeter sitting in the centre of the ML/LF cone to provide uniform and direct sound dispersion.

A micromesh aluminium grille provides an unobtrusive and clean look, while the included back box should allow simple and quick installation.
