Orb Audio launches a line of modular audio systems featuring a pair of new subwoofers (the subONEI and subMINI) together with the updated Mod1X, Mod2X and Mod4X speaker packages, just in time for its 10th anniversary.

All the speakers feature updated technology and improved audio performance via new aluminium driver, all within a distinctive spherical design.

The subONE has a 200W amplifier, anti-clipping and thermal overload circuits, and auto-voltage sensing technology inside a 12-inch cabinet with a "furniture quality" walnut finish.

Meanwhile the subMINI carries a 100W amp inside a 9-inch dual-port cabinet.

Being modular, Orb systems consist of either one, two or four Orbs (Mod1X, Mod2X, Mod4X). Customers can then build up their systems with more Orbs over time, depending on space and budget.

The Orb systems are available now in black, white, "hammered Earth," polished steel and antiqued copper and bronze finishes.
