Vision's AV-1000 Powered loudspeakers have been superseded by two new products; the **SP-1200P** has more power and is aimed to fulfill European tender specifications which often demand 30 watts.

The **SP-1100P** is a simpler, less powerful version which aims to win price-led business.

The new products are radically better: both use a Yamaha digital amplifier chip and are assembled on an automated computer-driven production line leading to greater reliability.

The SP-1200P also features Vision's new wall brackets which are unique to Vision and speed up installation.
