KEF launches a wireless version of the X300A desktop speakers at CEDIA Expo 2013-- the X300A Wireless Digital Hifi Speaker system, capable of streaming via Airplay or DLNA from Apple or Android devices.

The system features 4 dedicated amplifiers (2 per speaker), 2 discrete DACs and a high-resolution 96kHz/24-bit distortion-free USB connection (in wired mode).

Setup comes via wizard (OS X and Windows) available from the KEF website.

The company says users can switch the X300A between desk, free space and desk/wall modes by adjusting equalisation according to location via rear panel switch (desk and stand modes) or via foam plug for the rear reflex port (wall mode).

The speaker is available now in either "Gunmetal" or "Linear White" finishes.
