

Harman Professional introduces its **HiQnet Audio Architect version 1.1 professional audio configuration and control platform**, an upgrade that brings new functionality and features, including control of Audinate Dante-enabled devices, enhanced functionality for BSS Audio and Crown products, better on-screen control interfaces and others.

Audio Architect is the software element of Harman's Architectural Media Systems, and is a single control platform for all devices in a HiQnet sound system, from microphone to speaker. Harman Architectural Media Systems combines the processing power of BSS Audio and Crown Audio's category leading amplifier technology with the configuration and control capabilities of HiQnet Audio Architect. This solution provides audio professionals with the most complete, versatile platform available for small to large-scale AV system design, with the single point accountability of one-stop comprehensive support and logistics. Architectural Media Systems provides networked audio connectivity via the designer's choice of AVB, Harman's proprietary BLU Link bus, Cirrus CobraNet or Audinate Dante.

To facilitate system setup, Audio Architect 1.1 utilizes graphical, diagrammatic representations of the installed or live sound venue, and the components and loudspeakers in the system. Devices "understand" both their physical and logical placement – in racks, arrays and rooms – and the software "learns" how they are to be used in the real world, while offering extensive setup and configuration capabilities, now further enhanced with version 1.1.

Harman Pro: HiQnet Audio Architect Version 1.1

Audio Architect 1.1 now supports the Audinate Dante-enabled BSS Audio Soundweb London BLU-806 signal processor and BLU-326 I/O expander devices. Version 1.1 also enables signal naming and signal following in the software's BSS Soundweb London Route Audio Mode, giving users the ability to trace signals quickly and easily through the open architecture of a BSS Soundweb London device and between Soundweb London devices over the network.
