

Crestron Speakers Hit the Landscape

Written by Marco Attard
01. 10. 2013

Crestron launches the AIR landscape speaker series at CEDIA 2013 with two speakers and an in-ground subwoofer, together with upgrades on the company's A/V matrix switcher lineup.

The speakers (LS4T and LS6T) feature either 4-inch or 6.5-inch coaxial drivers and built-in 70/100V transformers. Both carry 45cm stakes for firm implantation in the ground, and ship with a bronze textured finish.

Meanwhile the in-ground subwoofer (IGS82T) features 8-inch 22-120Hz frequency drivers, 200W power handling, 8 Ohms nominal impedance and built-in 70/100V transformer inside construction complete with bronze textured portal cap.

Also seen at CEDIA are 4K/UHD upgrades on the CEDIA matrix switcher and extender families-- including the DigitalMedia matrix switchers and the HD-EXT3-C/HD-EXT4-C HDMI over HDBaseT extenders.
