Harman Kardon launches a non-portable Bluetooth sound system-- the Nova Wireless left-right two way speakers designed for use with PCs, tablets and mobile devices as well as TVs and living room applications.

Housed inside translucent "sculptural" casing are performance-tuned 2.5-inch midrange/woofers, 1.25-inch tweeters and a passive radiator for extended bass response. Amplification comes at 2x20W, while frequency response stands at 70Hz-20kHz. Further audio improvement comes through Harman Kardon DSP.

Wireless connectivity comes through Bluetooth and NFC. The company also adds analog and optical digital inputs for wired connectivity with STBs such as the Roku or Apple TV.

The Nova is available now as a pair.
