Yamaha upgrades the YAS-101 soundbar with the addition of Bluetooth support and mobile device app control and presents the YAS-103, a one-body system featuring dual built-in subwoofers.

Bluetooth connectivity allows audio streaming from any enabled device, while app control (via free Home Theatre Control) allows the adjustment of settings such as inputs and surround modes from iOS and Android devices.

Features such as Air Surround Xtreme surround sound technology, Dolby Digital and DTS sound support, Advanced Bass Extension processing and dual built-in subwoofers mean users do not need a separate subwoofer.

Inputs include HDMI, Optical, coax and analog, while built-in IR repeaters take care of remote control if the soundbar is installed in front of TV remote sensors.

The YAS-103 should be available from March 2014.
