

The "Invisible" Wireless Speaker

Written by Marco Attard

Minimalist speaker designs cannot get more, well, minimalist than the Clear View Clio-- a wireless speaker consisting of a 1 mm thin sheet of clear automotive-grade acrylic on top of a compact base.

The base houses a pair of actuators effectively turning the acrylic sheet into a dipole transducer to produce mid and high notes. Sound is produced from both sides of the speaker, creating a stereo effect.

A 2-inch woofer inside the base pushes bass notes.

Bluetooth support handles for wireless connectivity, while a 3.5mm jack allows connection of wired devices.

The Clio ships to retailers from May 2014.
