Sony starts shipping a pair of wireless speakers-- the SRS-X7 and SRS-X5, both packing Bluetooth connectivity with AAC and aptX support, ClearAudio+ and one-touch listening via NFC within a minimalist design.

Also featured is wired input via 3.5mm jack and USB, as well as with dual-passive radiator subwoofers.

The SRS-X7 is the more advanced of the two, with 32W of power, wifi connectivity with DLNA and AirPlay support and a battery life of 6 hours. The SRS-X5 has a longer-lasting battery (Sony claims 8 hours) but lacks wifi connectivity.

The two speakers are available now, with the SRS-X5 shipping in red, black or white.
