Primare starts shipping the high-end 60 series-- namely the PRE60 preamplifier and the A60 power amplifier, both promising "traditional build quality and analogue circuit design with the finest digital processing."

Designed as a "complement to all high-end amplifiers," the PRE60 supports high-resolution audio streaming up to 24-bit/96kHz from online, network attached and desktop sources. A digital audio input allows connection to CD players and mobile devices, while further inputs include 2 balanced XLR and 4 RCA.

Outputs include 2 pairs of RCA, balanced XLR and record. Control comes through either included remote or iOS/Android app.

Meanwhile the A60 is described by a Primare as a "fully balanced 2 x 250W UFPD" stereo amplifier. It carries 4 amps (2 per channel) in a balanced configuration, with each channel feature unbalanced RCA and balanced Neutrik XLR inputs.

Other features include WBT Nextgen speaker terminals and trigger and RS232 control inputs.
