Triad announces the addition of the InRoom and On Wall Bronze to its SlimSub line, each featuring a proprietary long-throw 10-inch aluminum driver to provide deep bas at high volumes.

The compact InRoom Bronze SlimSub is just 11cm deep. When laid down it requires just 13cm of clearance, allowing installers to turn it into a down-firing subwoofer one can hide under furniture.

The OnWall Bronze SlimSub 11cm. It is available in custom colours and is ideal for use with ultra-flat TVs using soundbars.

According to Triad the SlimSubs push maximum output of 108dB from 40-80Hz with a bass extension of -3dB at 25Hz. Both are paired with the Triad RackAmp 350 DSP amplifier, and are shipping now.
