

The Flexson Sonos Play:1 Mount

Written by Marco Attard

Sonos accessory vendor Flexson launches a tilting wall mount for the [Sonos Play:1](#) speaker, one allowing installers to fit and angle the speaker from just about every position, including ceilings.

The mount not only tilts and swivels left or right, but also allows upside down hanging to provide access to the control buttons on top of the speaker.

It fits the size, style and colour of the Sonos speaker with neat cable routing, easy fitting and flexible placement.

Flexson says the mounts also allow speaker deployment as part of a 5:1 surround package, in kitchens or simply out of reach for small children.

The mounts are available now in either white or black, and can be bought as single or pair packages.
