Teufel suggests an easier-to-install alternative to 5.1 surround systems with the Cinebase-- an audio-equipped TV stand featuring Sonic Emotion Absolute 3D technology for "truly immersive" surround sound.

The Cinebase is 70cm wide, 41cm deep and 11cm, and carries TVs weighing up to 60kg. The enclosure is in real wood, and inside are a 200W amplifier, 4 front-mounted broadband drivers, 2 side-mounted broadband drivers and 2 down-firing bass drivers with a 42Hz low end.

Meanwhile the Sonic Emotion Absolute 3D technology uses wave field synthesis, patented software and an own DSP unit to create a 3-dimensional sound image that retains its spatiality independent of listening position.

Audio connections include 1 coax digital, 1 optical digital and 1 stereo cinch, as well as HDMI, Bluetooth 4.0 and NFC. HDMI-CEC support allows control via standard TV remote.

The Cinebase is available now.
