Denon launches the DHT-T110-- a first TV speaker base from the company packing Dolby Digital decoding, 3 listening modes, virtual surround sound and aptX Bluetooth for CD-quality smartphone audio streaming.

It holds up to 27kg, and fits under most TVs measuring up to 50-inch. Inputs include optical and coax digital, as well as analogue, while audio comes through a 2-way speaker system with two 0.5-inch dome tweeters, two 2-by-5-inch oval drivers and two bass tubes in the back.

Further features include Dynamic Bass technology, a special Night Mode for late-night use, auto input switching and a learning feature for use with existing remotes.

The DHT-T110 should be available by mid-October 2014.
