The URC SNP-2 Streaming Media Player merges all music sources into one audio solution, providing access to streaming music services such as Sirius XM, Pandora, Rhapsody, vTuner and internet radio stations.

It also plays music stored on PCs, Macs and attached NAS drives, with support for Windows Media and iTunes files and playlists.

Control comes through either URC remotes, keypads and touchscreen, as well as companion mobile device app. An HDMI output also allows connection of the SNP-2 to a TV for viewing and control.

One can use the SNP-2 as either a standalone music component or connect it to the URC Total Control whole-home automation system for control throughout the home and outdoors. Total Control Amplifiers allow audio streaming to up to 32 zones, with control via any URC devices.
