Velodyne launches the Wireless Wi-Q series-- a pair of wireless subwoofers (specifically the Wi-Q 10 and Wi-Q 12) allowing customers to place the bass up to 15m away from the rest of the AV setup, even in a cabinet.

Ideal for 5.1 and 7.1 channel systems, the two subwoofers use the Velodyne WiConnect System, and carry green digital amplifiers, high-output extended excursion drivers, dual-layer large copper voice coils and adjustable 40-120Hz low-pass crossover. The Wi-Q 10 is the 10-inch option, while the Wi-Q is 12-inch.

Setup and control comes via remote complete with Auto EQ, presets, night mode, volume control and phase adjustment.

The Velodyne Wireless Wi-Q subwoofers are available now.
