

Marantz Adds to Network Audio Players

Written by Marco Attard
21. 01. 2015

Marantz launches a lower-cost followup to the NA-11S1 and NA800 component-style network audio players-- the NA6005, a product capable of internet radio streaming and playback of audio files from either NAS or iTunes.

It carries a hybrid configuration of the company's HDAM and HDAM-SA2 technologies, as well as digital-to-analog converters (DACs). Connectivity comes through wifi, ethernet, USB, Bluetooth and Apple AirPlay, while control comes through companion Hifi Remote app.

DLNA 1.5 compatibility allows the playback of audio files in DSD2.8MHz, DSD5.6MHz, 24-bit/192kHz FLAC, 24-bit/192kHz WAV, AIFF and Apple Lossless formats, as well as standard WAV, WMA, MP3 and AAC files.

The NA6005 ships from February 2015.
