At ISE 2015 Triad presents a loudspeaker designed for Dolby Atmos-enabled home theatres-- the Bronze LR-H, an in-room number the company describes as a combination of forward-firing and upward-firing speaker in one cabinet.

The forward-firing part features two 5.5-inch cone drivers and a 1-inch fabric dome neodymium tweeter in mid-tweeter-mid combination, while the upward-firing part contains four Atmos-enabled 2-inch neodymium drivers.

Power per channel clocks at 50-200W, with 4ohms impedance and 88Hz-20kHz (+/-3dB) frequency response.

Designed for use with the Triad Bronze centre channel, surrounds and DSP subwoofer, the LR-H can be used as for left and right front or left and right rear surrounds in a Dolby Atmos system, and will be available in an "unlimited" variety of custom paint or veneer finishes.
