Stealth Acoustics Ships SA255 Amp

Written by Marco Attard

28. 01. 2015

A replacement for the Stealth Acoustics 255R, the SA255 350W mono amp features new blue back-lit front panel graphics and a variable low-pass filter for use with Stealth (or other) passive subwoofers.

It provides 350W of power at 4 ohm loads. Installers can bypass the filter stage to allow a fool range of mono-brick operation.

A built-in limiter stage resists overloads and tightens bass response, while integration options include balanced XLR, unbalanced RCA line-level and speaker level inputs, all with pass-through outputs for maximum source flexibility. A no-signal auto mute function turns the amp off for energy conservation when audio signals are not present, and immediately turns it back on as soon as source content resumes.

The SA255 is shipping now.
