Bryston launches the Mini A-- a 3-way bookshelf speaker engineered and balanced for off-axis response packing a 6.5-inch woofer, 3-inch midrange and 1-inch titanium dome tweeter within a compact form factor.

It follows on the company's earlier Mini T, and promises high SPL levels without distortion or compression. Frequency response clocks at 60Hz to 20kHz (+/- 3dB) with 8 ohms impedance and sensitivity reaching 87dB.

Meanwhile the drivers are custom designed with die-cast aluminium baskets, substantial magnet assemblies and custom motor systems. Also included are premium grade binding posts along with padded feet, spikes and a black fabric grille.

The Mini A is available in natural cherry, Boston cherry and black ash, as well as custom finishes.
