Definitive Technology adds a white version of the W7 speaker to its Wireless Collection, making it ideal for customers wanting an audiophile-grade wireless speaker matching their current home decor.

The compact speaker features a cube-like design. It projects dynamic full-range sound through one 4-inch mid/bass driver, two side-mounted bass radiators, two front-firing 1-inch aluminium dome tweeters and two side-firing 1-inch aluminum dome tweeters arranged in what Definitive Technology calls a "Tri-Polar" configuration.

Driving all are four 15W amplifiers.

As a Wireless Collection component the W7 can be used as either a standalone speaker or as part of a whole-home wireless system. It streams audio from any device using PlayFi technology and a companion Definitive Technology Utility app.

"The W7 not only adds class and style to any room in the home with its sleek and sophisticated aesthetic, it's a state-of-the-art wireless speaker solution for listeners who want incredible sound from a compact form-factor," the company says. "The entire Wireless Collection offers different products for specific home audio needs and the W7 in white is the perfect example of a speaker that provides consumers with personalization because of its color, size and audio performance."

The W7 is available now in black as well as white.
