---

Triad Speakers launches a redesign of the InRoom OmniSub lineup for what the company says are "considerable" cosmetic and performance improvements, as well as features allowing for easier installation.

The lineup includes the 200W Sub8, the 300W Sub10 and the 500W Sub12. All can are ideal for 2-channel and home theatre applications in combination with the company's architectural and freestanding speaker products.

The amplifiers powering the subs are Class D, while upgraded long-throw excursion carbon fibre cone drivers yelled greater resonance with less distortion.

Meanwhile, in installer-friendly features Triad eliminates some lesser used settings and moves the controls from atop the cabinet to behind the grille for easy access even when installed in a furniture cabinet.
