LG adds the first Google Cast-enabled products to the Music Flow audio system with the Portable Wifi Speaker (Model H4 Portable), Wifi Speakers (Model H7/H5/H3) and Wifi Sound Bars (Model HS9/HS7/HS6).

All the above mentioned audio products allow customers to play audio from their smartphones, iDevices, PCs, Macs and Chromebooks, as well as listen to streaming music services such as Spotify, Google Play Music, Pandora, Songza, TuneIn, iHeartRadio and Rdio. Pairing comes through either Bluetooth or wifi (via Range-of-Flow technology).

Google Cast allows one to "cast" content through the cloud, allowing for better audio quality than Bluetooth.

Connection to mobile devices comes through the LG Advanced Wireless Network complete with easy customisation functions and features such as Home Cinema Mode and Auto Music Play.

"We are pleased to announce that LG Music Flow will be among the first audio speakers to feature Google Cast," the company says. "Google Cast is a perfect companion for LG's Music Flow audio system. We are excited to work with Google in making music a more enjoyable experience for consumers worldwide."
