Italian high-end speaker maker Sonus Faber aims at the lower end of the market with an entry-level audio series-- the Chameleon, a set of three speakers complete with interchangeable side panels.

The series consists of the Chameleon C centre-channel speaker, the Chameleon B bookshelf speakers and the Chameleon T floor-standing towers. All look rather stylish, with hand-crafted cabinets in solid wood and leather as paired with the aforementioned interchangeable lacquered-MDF side panels in white, black, metal blue, metal gray, orange and red.

Specification-wise each speaker carries a 29mm fabric dome tweeter, together with a single 150mm polypropylene cone driver for bass and midrange in the Chameleon C and B, and the combination of two 180mm woofers and a 150mm mid driver for the Chameleon T.

Sonus Faber recommends customers pair with bookshelf and centre-channel speakers with a 30-150W amp, while the floor-standing towers demand 40-300W of power.

The Chameleon speakers are available now.
