The Triad InRoom Silver LR-H home theatre loudspeaker combines traditional firing-drivers with an integrated Dolby Atmos-enabled module directing sound towards the ceiling.

It uses two front-firing 6.5-inch drivers with a 1-inch tweeter, together with an upwards-firing top array featuring four 3-inch drivers, making for a boost in both size and power from its predecessor, the Bronze LR-H.

When it comes to installations Triad recommends using a 5.1.4 Atmos configuration, with one Silver LR-H in each of the left and right front and left and right rear surround positions, complementing the center channel speaker and subwoofers.

Frequency range clocks at 80Hz-20kHz (+/-3dB), while recommended amp power range is 50-200W.

The Silver LR-H is available in a wide variety of colours and finishes, including custom paint-matched or veneered to match room décor.
