

A Discreet Opening System for Sonance Speakers

Written by Marco Attard

Sonance presents the Discreet Opening System for Visual Performance series loudspeakers-- a system using four small satellite speakers and a hidden subwoofer to provide even audio coverage across a space.

The speakers feature a micro-trim bezel matching the footprint of small round or square downlights, and promise to deliver "amazing sonic performance with minimal visual intrusion."

Meanwhile the industrial design allows for "clean, continuous sight lines and even distribution throughout a space," at least according to the company.
