Bowers & Wilkins launches the Zeppelin Wireless, a self-descriptive update on the distinctive blimp-shaped speaker featuring wifi, AirPlay, Spotify Connect and Bluetooth aptX connectivity.

It carries a 50W 6.5-inch subwoofer together with two 1-inch tweeters and two 3.5-inch midrange drivers, all rated at 25W. B&W says the digital signal processor also gets an upgrade, being able to convert to 24-bit 192kHz sound, while the cabinet features a stronger design for reduced vibrations and improved overall sound quality.

Control comes through B&W Control app, as well as hardware volume and play/pause buttons on the speaker. Wired connectivity comes through 3.5mm jack and ethernet port.

The Zeppelin Wireless is available now.
