---

Harman Kardon announces the Omni+ wireless speaker lineup at CES 2016-- an Omni collection update featuring the Omni 10+, 20+ and 50+ speakers, the OmniBar+ soundbar and the Adapt+ add-on for older non-wireless speaker.

Each piece of equipment in the lineup handles high-resolution 24-bit/192kHz audio streaming, with a companion mobile device app for the handling of Spotify Connect, Google Cast, Deezer, Tidal and other online music services.

Customers can also connect multiple speakers with the OmniBar+ to build either 3.1/5.1 wireless surround setups or Sonos-style whole-home music systems. Wireless connectivity comes through wifi and Bluetooth, while wired inputs include aux and an ethernet jack.

The Omni+ speaker lineup should be available from Q2 2016.
