Ecler launches the NEST 106 architectural cabinet, a 2 way full range speaker with integrated 100V line transformer for background music and public address in a variety of installations such as shopping malls, retail stores, schools, hotels, industries, offices, museums or conference rooms.

NEST106 can brag of a front panel in the shape of a partial sphere while the back is in the shape of a triangular pyramid. This permits a wide variety of potential installations, ranging from an individual sound box fitting perfectly in a corner to several units to make portions of a sphere or even a complete sphere.

Moreover, the grille of the NEST 106 can be easily painted (shown in the attached picture) with any color configuration.

The NEST 106 can operate at 8 ohms or at 100W in 7, 10, 15 or 30W power mode, and features Euroblock connection, accessories for wall mount and IP54 for outdoor installation.

The NEST 106 strengths are ease of installation, its colourful fashion, the flexibility of configuration at low or high impedance (100V line) in different powers and sound performance.
