Auro-3D joins forces with Triad Speakers at ISE 2016 to create an entertainment and luxury audio hardware division making use of both Auro-3D and Dolby Atmos technologies.

ISE has the two companies show off Triad Gold Monitor loudspeakers paired with the Auro GalaxisAudio sound processor and StormAudio Class D Audio multi-channel power amplifiers. The demos feature Auro-3D and Dolby Atmos content, including music clips and film content.

“While traditional surround does a great job of enveloping the listener, it’s limited to a horizontal plane, making it a thing of the past,” Triad says. “It makes sense that now in the world of home cinema, 3D audio is where it’s at, as it creates another level of realism.”

Also seen at the show is the Triad InRoom Platinum subwoofer with 18-inch low distortion aluminium cone woofer, powered with the RackAmp 600 DSP amplifier. Meanwhile Auro features the GalaxisAudio MENSA sound processor, as part of a system driven by the StormAudio Class D PA14.200 and PA8.200 multi-channel power amplifiers. The configuration is designed for large home theatres, and comprises 22 channels and a 400W power plant.
