Atlantic Technology presents a wireless alternative to RCA audio cable-- the WA-60 Wireless Audio System replaces long audio cables with low-frequency response down to 10Hz.

Designed for subwoofers, the system can also find use in connecting receivers, computers or any line-level audio devices across a room or from one end of the house to the other, with 21m range (or 45m line-of-sight). As a successor to the WA-50, the WA-60 improves low frequency response while boosting range and increasing the number of channels.

The company says the system offers full-range CD-quality sound with no interference or time delay. Each receiver-transmitter pair uses one of four separate carrier frequencies, allowing the simultaneous use of up to four WA-60 systems in the same space with no signal overlap.

The system broadcasts a full-range 10 to 20000Hz stereo audio signal anywhere across multiple rooms while maintaining signal-to-noise ratio of 93dB.

The WA-60 is shipping now.
