---

Autonomic announces the MMS-1e whole-house music player and the M-120e four-zone amplifier-- both featuring eAudioCast audio-over-ethernet technology allowing for high resolution connections using a single CAT5e cable.

The solid state-based MMS-1e music player is an entry-level product ideal for customers wanting to enjoy streaming content throughout the home. It can be leveraged as a low cost single stream music player utilised as a standalone solution within a control system environment, or paired with an Autonomic eSeries amp to double capacity to two independent network content streams.

It handles many popular streaming audio services, including Deezer, Pandora, SiriusXM, Tidal, Tunein, iHeartRadio and iTunes, among others, with TuneBridge technology allowing one to pick favourites from one services and transport them to another.

When paired with the M-120e amplifier the MMS-1e delivers a two-stream/four-zone entertainment solution installers can expand via ethernet to as many as 96 zones, enabling customers to grow their music system while enjoying the same UI offered by the basic package.

The MMS-1e and M-120e should ship from September 2016.
