Martin Audio brings the BlacklineX series of passive loudspeakers to ISE 2017 for a first European showing as main focus in a static stand display, as well as a central cog in a demo room experience.

First announced back in October 2016, BlacklineX represents a reinvention of the original 1999 Blackline Series. The update consists of four 2-way systems, from the ultra-compact X8 to the powerful X15, and three subwoofers including an unobtrusive slimline model.

Also hosted at the Martin Audio ISE demo room are presentations of the O-Line, CDD Series and CDD-LIVE, designed to offer a better understanding of the products supported by case studies and listening time.
